### Settings

Please update your profile by clicking through the menu tabs.

- Personal data** You can edit/update your user info, including contact email, username and password.
- Department info & expertise** It is really important for users to keep information regarding their Department updated. In doing so you will appear as a dedicated card within your organisation on the home grid, and others will feel motivated to start a connection request based on same interests. Bear in mind that the more complete your profile is, the easier it will be to find the right partners!
- Invite organisations** Please do not hesitate to invite colleagues outside your organisation as well! That way, the network of users will be enhanced with companies providing technology offers/requests and services according to your particular interests. It is very simple, please head over to [this form](#)
- Offers/Requests & News** SMEBOOK features the possibility to post specific Service offers and Service requests, so that connections can be made even more to the point. Your company will be more visible in the platform as these posts are also reflected in your card on the home grid. Please feel free to submit your new offers or requests at any time.
- Your network** You can review which companies have been assigned to your network and withdraw those that currently are not a cluster member
- Organisation info** You are currently registered as the owner user of Aera. As such, please keep updated any relevant data at the organisation level. This information is inherited by other users within your organisation. Plus, your card on the home grid will look more complete and cooler!
- Add users** Please add new users within your organisation. Adding representatives of your different departments will drastically improve your company's characterisation, leading to higher chances of finding your best business partnerships. In addition, each user will be able to manage his/her profile and to interplay with other users autonomously. The process is easily started by [notifying your workmates](#) to join SMEBOOK.
